

# The Red Bird

## BEARINGS

Are far ahead of anything yet produced in the way of non-friction, easy-running bearings. The new caged bearings with which the Red Bird is fitted are so constructed that they reduce the friction to a minimum—the balls being kept apart by a light revolving disc—and instead of being weakened the bearing is much stronger, and the balls are far less liable to break than with the ordinary bearing. Not only in this respect does the Red Bird supercede all others, but in appearance and general get-up as well. THE NEATEST WHEEL MADE.

## The Red Bird Special

### Model 51

Is the record breaker for 1899, and will prove to be a general favorite.

We have lower grade wheels, and every one is a bargain.

If you have not seen the new bearings, call at the  
**VERNON NEWS OFFICE.**
